

DMITRII FEDOROV

laditeo@tuta.io

Technical Art Lead & Vision Director

Character Development | Realtime Media | Stylized CG Production

Cross-functional Technical Art Director with a strong foundation in full-cycle character development, real-time media, and high-end CG production. Blending a deep passion for stylized fantasy aesthetics (miHoYo/anime-inspired) with heavy technical expertise in Unreal Engine, custom pipelines, and interactive pipelines. Proven track record of bridging the gap between artistic vision and complex technical execution, handling everything from concept art and sculpting to advanced engine rendering and audio-visual integration.

Hard Skills

- **Concept Art & Visual Styling:** Full-cycle character design and high-end concept art in Clip Studio Paint; deep, advanced mastery of color theory, lighting, and atmospheric composition driven by a heightened synesthetic perception of reality.
- **Full-Pipeline 3D Character Development:** Expert in sculpting, retopology, baking, rigging, and texturing across a comprehensive toolset including ZBrush, Blender, Nomad Sculpt, 3D-Coat, Substance Painter, Marvelous Designer, and MoI 3D.
- **Advanced Rendering & LookDev:** High-end scene assembly and rendering using Unreal Engine (asset import & scene setup), Marmoset Toolbag, Octane Render, and cinema4D (leveraged for complex visual simulations).
- **Real-Time Media & Interactive Tech:** Designing and deploying live projection mapping, interactive AV pipelines, and bi-directional video/data streaming using Unreal Engine, TouchDesigner, Spout, and OSC/IP protocols.
- **VR Art & Spatial Development:** Extensive experience in VR-native sculpting (Gravity Sketch, Adobe Medium, ShapeLab) and full-cycle XR/VR application development.
- **3D Asset Optimization & Printing:** Advanced mesh clean-up, topological repair, and optimization of massive high-poly datasets for precision 3D printing.
- **Cinematic Video Production:** Professional EXR-based multi-pass render pipeline from Blender with advanced color grading, conforming, and finishing in DaVinci Resolve.
- **Audio Production & Sound Design:** Full-cycle scoring, sound design, and SFX in Ableton Live; experienced in composing multi-genre soundtracks synced directly to video on the timeline (MP4 integration).

Soft Skills

Fluent C1 Multimedia professional with an open, communicative approach and strong international experience. Exceptional at translating complex technical jargon into accessible concepts, building networks, and maintaining a calm, grounded presence within team dynamics. A hyper-adaptive power-user of advanced AI tools (Cursor, Gemini, Claude, GPT) capable of mastering any tool or solving complex pipelines within hours, while utilizing a fully mobile, highly optimized personal hardware setup. Accountable and reliable with commitments, highly stamina-driven when aligned with a project's vision, and consistently able to navigate tight deadlines, intense feedback, and high-pressure release environments.

Tools

clip studio paint

Experience

2026

Uvelka - making content for led screens on exhibition.
baking alembic with heavy simulations in cinema 4d
and exporting to blender for team render

2023 - 2025

freelance projects:
developing fashion characters for event by **VK**
3d animations for companies including **RosAtom**,
assist w cover arts for artists including **Yolka**
creating 2d textures for music video by **Dolphin**

2023

Era
making 3d renders and threejs apps for
ecosystem of nature based supplements

2021

honkfu - spine animations, 3d assets,
spark ar interactive character development

2020 - **DAP**

Light Mapping Shows (Moscow)

Designed and rendered high-end 3D content optimized for large-scale projection mapping at major corporate events, festivals, and music venues. Developed seamless immersive visuals and managed the technical pipeline, encoding high-resolution assets into the HAP codec for flawless real-time playback in Touchdesigner and Resolume Arena.

2017 - 2018

Visual artist on Truck factory **DST URAL**

Developed a series of custom corporate manga-style illustrations for an industrial bulldozer plant to elevate brand identity and visual engagement. Handled the full creative pipeline, translating heavy industrial themes into compelling, stylized visual narratives.

Language

Russian Native | English C1

personal projects:

Crystal Palace: Live AV Performance & Custom Engine Build

- Built a custom version of Unreal Engine from source to enable advanced ray-tracing (RTX) capabilities and realistic, high-end iridescent caustics.
- Created a fully realized "Crystal Palace" interactive environment for a live music performance, where I performed as the lead vocalist.
- Developed a custom blueprints system to trigger cinematic camera sequences on a projector in real time using a Bluetooth gamepad.
- Achieved highly optimized performance, maintaining a stable 50 FPS on a mid-range hardware setup (RTX 3070 Mobile) under heavy ray-tracing load.

ALEA: Solo Stylized Mini-Game & Full-Cycle Production

- Executed the full-cycle production of a stylized fantasy mini-game, handling everything from initial lore to final engine implementation.
- Designed, sculpted, and fully rigged an original character based on self-generated concept art.
- Integrated complex VFX pipelines, including baked Alembic fluid simulations from Blender and Niagara particle systems driven by video textures.
- Composed and implemented an original custom sound design layer to enhance environmental immersion and character feedback.

Advanced SparkAR Interactive Filters & Face/Object Trackers

- Developed complex SparkAR effects utilizing advanced 3D logic and animated GLB models under tight platform performance restrictions.
- Mastered the SparkAR asset pipeline through rigorous optimization and iterative testing, gaining deep expertise in mobile real-time rendering constraints.
- Engineered a custom, high-accuracy object tracker for a physical tea disk utilizing a complex Patch Editor node network; achieved instant tracking initialization under various lighting conditions.
- Integrated multi-layered visual elements into the tracker, including a custom 3D flying dragon model and dynamic ambient leaf particle systems.

Animated 3D NFT Tokens (hic et nunc & objkt.com)

- Created and launched a series of animated, optimized GLB tokens for clean, real-time web rendering on Tezos-based marketplaces.
- Handled full-cycle creation, from stylized 3D modeling and animation to successful commercial release, resulting in high sales volume and strong collector engagement.

Generative WebGL & Three.js Art (fxhash)

- Developed and published generative artwork on the fxhash platform using Three.js and raw WebGL concepts.
- Implemented complex math logic to parse the unique transaction hash into seed data, driving randomized 3D mesh variations, dynamic procedural shaping, and unique color palettes.
- Optimized real-time browser rendering and animation loops to ensure smooth performance across both desktop and mobile web devices.
